

AMIR RAHAFROUZ

Software/Data Engineer

I am Amir! I admire simple solutions to complex problems. I enjoy working on challenges around distributed systems. For the past few years I've been focusing on data-intensive software engineering.

SKILLS

Java/Go/Python	●●●●●
Containers/k8s/CI/CD	●●●●●
BigQuery/Dataflow	●●●●●
DBT/Airflow	●●●●●
Apache Spark	●●●●●

PROFESSIONAL EXPERIENCE

TECH LEAD @ SEB EMBEDDED

Data Platform Team - Stockholm, Sweden

Feb 2023 - Now

- Built and coordinated an **analytical data platform**, aligning data engineers across product teams and the central data team to create a single source for all reporting.
- Guided the organization in selecting and implementing the right technical tools to address scaling challenges.
- Streamlined the **data reconciliation** process to improve data quality, engaging architects, managers, developers, and product teams. Enabled data producers to expose APIs for validation and to replay data.
- Enabled product teams to use analytical data in the operational applications by exposing warehouse data via APIs, and identify use-cases where the solution can be simplified.
- Established **Technical Alignment Forum** in the engineering organization to bring transparency to decisions, to benefit from architecture, without architect role in the organization. Major outcome is formalized RFC/ADR process in the organization.

DATA ENGINEER @ SEBX

Insights Team - Stockholm, Sweden

Oct 2021 - Feb 2023

- Working around building a streaming data platform in the Cloud using the following ingredients:
 - Apache **Beam** (Dataflow), **BigQuery**, **Airflow**, **Spark** (for batching out and reconciliation), **DBT**, **Looker**.
- We took **AVRO** as a governance tool, aiming at automating everything that could be automated.
- Simplify batch and streaming ingestion from Gigaspaces to BigQuery via Spark. Helping product teams own their own data.

SOFTWARE ENGINEER @ NETENT AB

Datalake team - Stockholm, Sweden

Sep 2019 - Oct 2021

- Ingesting data from hundreds of **on-prem** services, storing them in the lake on the GCP. Data is loaded into **BigQuery**, **BigTable**, and **Apache Druid**, and exposed via API to internal and external customers of the organization. Taking end-to-end responsibility, including developing softwares (Java, Go, Python), building data pipelines (**Spark**, **Dataflow**), administrating infrastructure (**Kafka**, **K8S**, **Druid Cluster**, **Ansible**) Performing tests and QA (Custom software in **Java/Go** and tunings of Spark jobs) and supporting via on-call rotations (Gitops, Grafana, and unreadable prometheus alerts)
- Later on, after getting acquired by Evolution, I was helping out on **integration** to the Evolution data systems.

DEVELOPER/ SYSTEM ADMIN @ IUT

IT Center - Isfahan Uni. of Tech. - Isfahan, Iran

2013 - 2016

- Part time job in university working as web developer (Drupal), Linux Administrator, Software Engineer.

ACADEMIC BACKGROUND

ERASMUS MUNDUS JOINT MASTER'S DEGREE ON PERCCOM

Pervasive Computing and Communications for Sustainable Development
2017 - 2019

MASTERS DEGREE IN PERVASIVE COMPUTING

Lulea University of Technology - Sweden

MASTERS DEGREE IN SOFTWARE ENGINEERING

Lappeenranta University of Technology - Finland

MASTERS DEGREE IN COMPLEX SYSTEMS ENGINEERING

University of Lorraine - France

BACHELOR'S DEGREE ON SOFTWARE ENGINEERING

Isfahan University of Technology - Iran
2011 - 2016
